

REPORT
OF THE
BOARD OF ADMINISTRATORS
OF THE
CHARITY HOSPITAL
TO THE
GENERAL ASSEMBLY OF THE
STATE OF LOUISIANA

1923

NEW ORLEANS

THE
CHARITY HOSPITAL
 OF LOUISIANA

WAS FOUNDED IN THE YEAR 1786

BY

DON ANDRES ALMONASTER Y ROJAS,

To whose generous endowment, the munificence of the

LEGISLATURE OF THIS STATE,

and the liberality of the State of Pennsylvania, the community is indebted for the means of erecting this edifice, built in the year

1832

His Excellency A. B. Roman, being Governor and Ex-Officio
 President of the Institution.

To record which and inscribe hereon the names and contributions of its distinguished benefactors.

THIS TABLET HAS BEEN ERECTED

Etienne Bore	\$ 1,000.00	Graduate Nurses, Class of 1910	500.00
Robert Cune	1,000.00	F. T. Howard	10,000.00

ANNUAL REPORT OF THE VICE PRESIDENT

FRED. W. EVANS.

February 18th, 1924.

Governor John M. Parker, Ex-Officio President, Board of Administrators,
Charity Hospital of Louisiana, Baton Rouge, Louisiana.

My dear Governor:

It is very gratifying to call your attention to the accompanying reports of Dr. Wm. W. Leake, Superintendent, which cover in detail activities during the past year, and especially to those innovations which directly affect the welfare of the patients. It is pleasing to note that nearly everything accomplished had in mind betterment of service to the unfortunates. For instance, the fire hazard has at last been reduced to a minimum by the completion of the sprinkler system in all places where patients are housed; the splendid organization and efficiency of the Visiting Staff, the House Staff and Interne Corps, and the partial installation of bed signals, whereby the patients call the attendant or nurse.

While our per capita cost, \$1.56, has slightly increased over last year, \$1.537, and considerable increase is shown in the cost of the Out-Patient Department, it is an interesting fact that the established efficiency in the Out-Patient Department materially reduces the cost of maintenance of the ward patient, as work in the Clinics was previously duplicated when a patient was admitted to the ward from the Out-Patient Department. In overcoming this condition, it was necessary to increase the clerical help in the Clinics and to provide the unit history system.

It is also very gratifying to note that the budget for maintenance prepared for the Louisiana Tax Commission to cover the period July 1st, 1922, through June 1924, was so accurately estimated that our actual expenditures during the same period exceeded the budget by the close margin of \$1,000.00. This also partially explains the deficit as shown in the Treasurer's statement.

You will, no doubt, recall that during and after the session of the Legislature of 1922 this Board, with the valued assistance of the Visiting staff, made persistent efforts to obtain funds for the construction of better housing accommodations for the internes and additional quarters for the nurses. Failing in our efforts, with your consent an appeal was made to the public early in 1923. However, a condition arose in the latter part of the year which caused the Board of Administrators to abandon the original object and make the appeal to remedy the crowded condition of the wards. An increase in the average number of patients during the early part of 1923, as compared with the latter part of that year was almost one-third greater, and in many wards patients were two in a bed. The Appeal Fund netted approximately \$300,000.00, and contract has been let through the architects for a building to provide approximately ninety additional beds. This building has been so designed and will be so constructed as to lace into an entirely new Hospital group.

The House Committee (Mr. Geo. J. Glover, Chairman, Mr. C. C. Cowles, and Mr. Terence Smith), being composed of men so eminently fitted for the character of work, carefully studied the physical condition of the buildings, and reported to the Board of Administrators that it was their opinion any contemplated addition to the old buildings comprising the main hospital would be a waste of State's funds, and at best would only afford temporary relief.

This Committee is unanimous and the Board concurs in their opinion that the time has arrived when an entirely new structure composed of modern fire proof buildings should be seriously contemplated. The Board has tentative plans and estimated costs showing that it would require the sum of \$3,500,000.00 to carry out this project in full. The first unit, or left wing, will cost \$1,162,000.00, and architects have been engaged to prepare plans and specifications so the matter can be placed before the coming session of the Legislature with some degree of accuracy, hoping that the State may find funds to finance the first outlay and later covering period of some four or five years finish the entire new structure. We cannot overlook the necessity of providing better quarters for the internes and adding to the Nurses Home permanent quarters for additional nurses. It is contemplated that the sum of \$300,000.00 would be required and this sum we will also request from the Legislature.

Each member of the Board of Administrators took an active interest and gave his time freely during the Charity Hospital Appeal. Mr. William Pfaff, as Chairman of the New Orleans Committee, and Mr. C. C. Cowles, as Chairman of the other Parishes, did wonderful individual work, and the other members of the Board assisted by taking up separate divisions, which in all was largely responsible for the success that we had.

It is with pleasure that we thank the Sisters of Charity for the exercise of that zeal which actuates the noble and glorious work performed by them.

The Charity Hospital Needlework Guild, composed of ladies who are interested in the Hospital, has continued the active work begun several years ago and renders valuable aid in procuring and providing garments, surgical dressings, etc., for which we extend our sincere appreciation.

The Masonic Order, Druids, Moose, Woodmen of the World, Benevolent Knight of America, Knight of Columbus, and other fraternal organizations, church organizations and individuals contributed money, rolling chairs, stretchers, and numerous other articles, which were useful and appreciated and to whom we also extend our sincere thanks.

The New Orleans Lodge No. 30, Benevolent and Protective Order of Elks, each Christmas remembers everyone in the Charity Hospital, but particularly the little children in the Milliken Memorial, where they provide a large Christmas tree, entertainment and distribution of toys, clothing, etc. I assure them the Board of Administrators unanimously extends them its sincere thanks and appreciation.

To the Medical profession composing our Visiting Staff, who have so splendidly and punctually performed their duty toward the patients, the Board of Administrators is very grateful. Their regularity and unanimity of efforts reflects the fact that they appreciate the serious importance and magnitude of the work expected of them.

The Advisory Committee of the Visiting Staff is responsible in a marked degree for the wonderful progress made in the past year. Their co-operation, intelligent understanding and eagerness to serve at all times, merits the highest praise and sincere appreciation of the Board.

Dr. Leake without thought of self at all hours day and night has given us a service beyond compensation, and for which the entire Board is deeply appreciative.

The records of the institution have been kept perfectly, our touch with the public has been courteous, businesslike and efficient, for which we are indebted to our Secretary Treasurer, Mr. Fred. W. Matthews.

Yours respectfully,

F. W. EVANS,

Vice-President Board of Administrators.

SUPERINTENDENT'S REPORT

New Orleans, La., February 18th, 1924.

To the Honorable Board of Administrators, Charity Hospital, New Orleans, Louisiana.

Gentlemen:

In the report of your Superintendent a year ago, it was stated a not unlikely prophesy that Charity Hospital was destined to become one of the foremost hospitals in the country. If this prophesy is fulfilled, the year 1923 will certainly play no small part in reaching this goal.

It is conservative to say that at no time during the history of the hospital has such marked progress been made as during the past year. Diligent, persistent and faithful work by all and the proper spirit of co-operation is responsible for this result.

The Visiting Staff, always mindful of the great responsibility of administering to the sick and injured has been painstaking in its duty, and the hospital is greatly indebted to them. They gave liberally their time and skill and is it safe to say our patients received medical care equal to any. The stay day per patient was also reduced from nineteen to seventeen, showing closer attention and quicker service. The monthly staff meetings with analysis of cases, prove instructive and interesting and a source of stimulus to all.

There is considerable feeling in the staff that a certain amount of hospital abuse exists at present. This is especially true of compensation cases. An active hospital abuse committee of the staff is at work at present, and in due time will present sufficient data with its recommendations to the proper authorities.

The plan of re-organization of the staff and changed distribution of services, with a view of concentrating the work was completed, and a distinct advantage gained. In order to bring this about, it was necessary for some of the members of the staff to give up some of their work. This was done willingly, for they are ever ready to give up personal gain for the good of the hospital.

At the annual meeting of the staff, held last October, the present Advisory Committee was re-elected. This committee, consisting of Dr. Jno. Oechsner, President, Dr. H. W. Kostmayer, Vice-President, Dr. Muir Bradburn, Secretary, and four additional members, Drs. F. W. Parham, Paul Michinard, Homer Dupuy and Paul Gelpi, was invaluable to the Superintendent, and he takes this means of expressing his appreciation of the valuable work done by its members. Their timely suggestions and thorough co-operation made it possible for the hospital to make unprecedented strides.

The new system of house doctors, consisting of three surgeons and two house medical officers is proving entirely satisfactory. These doctors by their loyalty and faithful performance of duty have lessened the burdens of the Superintendent, and he expresses his thanks for their willing co-operation.

It will be of interest to note that for interne service in the hospital beginning July 1st, 1924, some ninety applications were received. These applications came from twenty-one colleges. This should be especially gratifying,

when it is known that there are not enough graduates from Class "A" colleges to supply the needs of the hospitals. Charity Hospital received applications two-thirds in excess of the number required.

The present interne corps has given entire satisfaction and valuable service to the hospital. It is to be hoped that in the near future a suitable building will be provided to house all in one building. Many are quartered on Canal Street, some blocks away, which is certainly not conducive to the best administration of the hospital.

It was decided to furnish emblems in the shape of keys for internes who served satisfactorily a year in the hospital.

An appeal has been made for increased quarters for the nurses and the need of same is more acute now than ever. It was intended to dwell at length on this necessity, but the accompanying report of the Superintendent of Nurses takes this up in detail.

In order that the nurses may have some out-door recreation, a tennis court has been made for their use.

The Department of Dietetics is progressing satisfactorily, and is fulfilling the needs of those patients who require special diet.

A supervisor of the dining rooms situated in the Milliken has been appointed and should tend to bring this service up to entire satisfaction.

Probably the outstanding improvement of the year, was the completion of the annex to the Out-door clinic. Now, all such patients are attended in one building. The advantages of this arrangement are evident and facilitate very much the handling of cases, where the advice of the different specialists is sought. The admission of patients for hospital care is facilitated, for this building is contiguous to the Main Building. The proximity of the X-Ray Department and a well equipped Pathological Laboratory in this building are distinct advantages.

A central Record Room is now maintained and accurate records of all patients kept. An increased clerical force interviews all patients and type-written data on the clinic charts accompany all patients to their respective clinics. These same charts with the findings and complete laboratory reports are sent to the wards with the patients when admitted. This practice prevents duplication of work as was formerly the case, and is of great economic value to the hospital, to say nothing of the economic value to the patient, as his stay day is materially reduced.

All clinics in this building were renovated and the care now given patients is excellent. The Genito-Urinary Department, formerly in the other building, and kept in the background, is now so equipped that it is considered one of the show places of the hospital.

A new fracture service was started both in the hospital and the out-door department, and the attention given these cases cannot be excelled.

A dental afternoon clinic, exclusively for the inmates of the hospital, was also established. The advantage of this in the prophylaxis of mouth cases is evident.

The Accident Room which was formerly in the center of the Main Building, has been moved in the rear and adjacent to the clinic. This is now a distinct unit, consisting of three rooms, and the present arrangement tends to better service. Often as many as two thousand cases are attended monthly, and no undue delay is experienced. Ambulance cases are brought in this room and ambulatory sick and injured cases, now enter from Howard Street. Thus all patients to hospital now enter either from the clinic or Howard

Street entrance, thereby relieving the congested condition at the front entrance.

The Admitting Room was also moved to this location and facilitates the admission of patients. Examination rooms are adjacent. A more convenient arrangement could not be made. Typewritten admission records with a tentative diagnosis now accompany all patients to the ward. Duplicates are sent to the office of the Superintendent, Record Room and Telephone operators for general information for the public.

Bath rooms have also been built adjoining the Admitting Room, where patients before being admitted are given the necessary cleansing bath.

The Clerk's office formerly next to the telephone exchange has been moved next to the Admitting Room, thereby facilitating the work of both these departments. Much of the furniture and all of the desks of these departments were made by our own cabinet makers.

The Record Room was moved from over the telephone exchange to the Main Building with greatly increased floor space. It is contemplated to house records in an attractive way and make all records available for those who wish to consult them. It might be of interest to note that over twelve hundred inquiries were made from the record room from June 1st to the end of the year.

A special clerk has been employed to check all histories sent to the Record Room and see that all histories within the hospital are written within the twenty-four hour period.

The old space formerly used for the Accident Room was converted into an Observation Department. This consists of four rooms with ample waiting facilities for visitors. Those patients who apparently will die within a few hours are put in these rooms thereby relieving the ill effects of such patients dying in the general wards. The rooms are also used for those cases where it cannot be determined whether operation should be performed immediately or within a few hours.

The Physiotherapy Department has been moved to larger quarters and under the able supervision of Miss Bentley is proving a wonderful benefit both to the patients in the hospital and those in the out-door department.

The nurses' signal call system has been completed in the white female building, Main building; and is nearing completion in the obstetrical department of Milliken. By this system much better attention is given to the wants of the patients.

The sprinkler system during the year was completed in Ward forty-eight, ambulance house, laundry, warehouse and the clinic, which now gives us twelve buildings completed. Regular tests are made on these buildings and monthly reports submitted. The fire hazard now is certainly brought to a minimum and it is safe to say the patients are well protected.

A complete re-organization of the Pathological Department was made and with the increased number of workers the needs of the hospital will be adequately cared for. It is deemed advisable after a thorough investigation to discontinue the manufacture of our own sera. This product will now be bought on the open market.

The X-Ray Department under the efficient management of its present director is doing a voluminous amount of work and is giving universal satisfaction to the hospital.

Six new view boxes were made for the display room. Some of the films from this department were exhibited at several of the conventions, and, at the exhibit of the American Medical Association in San Francisco, received special meritorious mention.

The Social Service Department with an increased number of workers has proved very helpful to the hospital. The usefulness of this department will

depend on the number of workers that the budget will permit the hospital to employ.

It is gratifying to report that all three of the ambulances are in splendid running condition and the service in this department is of the highest efficiency.

An Occupational-therapy Department has not been established as yet due to the lack of funds, but volunteer workers visit the wards at regular intervals and it is to be hoped in the near future such a department will be established.

The vehicle entrance on Howard Street which was always a source of danger has been greatly enlarged. A separate entrance and exit now are in operation. Between the two, a small house has been erected for the use of a twenty-four hour watch and it is contemplated to put in effect the check system on all employees entering the hospital. The report of this check will be sent to the Secretary's Office to compare with the report furnished by each department.

The old garbage house was moved from this vicinity to Gravier Street, so that where formerly this entrance was an eye sore, it now presents a most pleasing appearance.

Clinic Building number two, is now undergoing some alterations and will be used for housing the white female help. At present they are in overcrowded quarters over the warehouse. Their removal from the warehouse will permit this building to be renovated and used exclusively as a warehouse. This will bring about a decided improvement and will permit all goods to be received and checked in one department.

Recently the hospital purchased 260 milligrams of radium. This will prove of special benefit to the patients, as formerly it was necessary to depend upon borrowing some amount from one of our visiting staff. While with this method we were greatly indebted to the generosity of the visiting staff, yet our needs were met in only a very limited way.

In outlining the improvements and progress of the hospital, let it not be forgotten there is yet much to be accomplished.

With the accompanying statistical report your attention is called to the ever increasing number of patients and demands made upon the hospital. Hospital days were 382,885 as compared to 354,633 the previous year, and yet the per patient day was reduced from nineteen to seventeen. The daily average number of patients was 1,050 as compared to 971. The per capita cost of \$1.56 for the year continues low and is about one-half of the amount of the hospitals whose statistics have been reviewed. The crowded conditions are ever present, with as many as 1,184 patients housed in 1,142 beds.

The Board of Administrators in its wisdom anticipated the increased demands made upon the hospital and while the legislature had materially increased the appropriation for maintenance, yet it was unknown that the amount given was not sufficient to meet the demands. The Board having exhausted every means through the state made an appeal to the public for necessary funds to relieve the immediate emergency. While the amount realized did not fully come up to the expectations of those who worked so diligently, yet the Board must have a sense of great satisfaction to know by its arduous labor and personal efforts they were able to raise in the neighborhood of \$300,000.00. This in no way will be sufficient to meet the plans outlined by the Board, but as stated above will relieve the immediate emergency.

Diligent and painstaking work was made on the budget for the next two years, and it is sincerely hoped that the legislature will be able to make the entire appropriation asked for.

An addition to the colored female building was completed, increasing the number of beds by thirty. Plans for an additional building along Gravier Street are under way and construction of this building is expected to begin within the next few months.

Among some of the improvements in the hospital was the painting of Wards 8, 9, 10, colored female building, sister's home, executive officers, clerk's office, Pathological Department, contagious ward, physiotherapy, Milliken elevators and painting and renovation of hall in Main Building.

There were also installed:

Many new full screens in the buildings.

New dining room Ward 51.

Kitchenette in Ward 49, for tubercular patients.

Large Dobart dough and egg mixer.

Double range, Milliken kitchen.

Complete renovation of barber shop.

Infants bath—Ward 39—with anti-scalding valve.

New settings for boilers.

Single acting vacuum pump.

Sink rooms on three floors main building converted into service rooms.

New equipment in laundry.

Six utensil sterilizers—our own make and installed.

All toilets in colored female building equipped with flush valves.

A new mortising machine.

Seven chart cabinets.

Eight new elevator doors in Milliken Building with stud and plaster walls—thereby preventing much unnecessary noise.

In conclusion permit me to thank each and every one attached to the hospital for their conscientious work. Without such active support, no constructive administration could be carried on.

A special vote of thanks is to be given to Sister Stanislaus, for her many constructive suggestions.

It would be remiss if your attention were not called to the fact that Sister Mary Vincent, who has given such devoted service to this hospital, will have completed fifty years of active service this February. This is an unusual record, and to her the hospital is under deep obligation. Her only reward is the knowledge of the many good deeds she has performed.

Mr. Fred. W. Matthews, Secretary-Treasurer, by his willing co-operation and active assistance, has rendered invaluable aid to the hospital administration.

Respectfully submitted,

WM. W. LEAKE, M. D.,

Superintendent.

SUPERINTENDENT'S REPORT

To the Board of Administrators, Charity Hospital, New Orleans, La.

Gentlemen:

Herewith I submit to you my report for the year 1923:

REPORT OF SUPERINTENDENT OF CLINICS

January 31st, 1924.

Dr. W. W. Leake, Superintendent, Charity Hospital of Louisiana.

Sir:

We have the honor to submit the annual report of the Charity Hospital Out-Patient Department for the year 1923. During the year 41,434 new patients were admitted and 143,000 visits were made with a daily average of 493, an increase in total visits over the previous year of 9,720. This increase is much greater than is at first apparent. During the construction of the annex and the additional story to the clinic, some of the clinics were occasionally closed and the Dental Clinic was discontinued more than three months. These figures do not include the Pasteur Clinic, a report of which is given by the Pathologist. Statistical table follows:

Service	New Cases	Consultations	Total No. Visits 1923	Total No. Visits 1922
Fracture	694	4,048	4,742	
Surgery	11,739	26,563	38,302	39,532
Medicine	7,042	12,839	19,881	18,184
G. U. for Men and Salvarsan	3,066	20,658	23,742	24,299
G. U. for Women	656	1,934	2,590	2,127
Gynecology	2,963	1,868	4,831	4,401
Obstetrics	1,048	1,857	2,905	2,552
Pediatrics	2,480	4,151	6,631	6,705
Neurology	658	2,386	3,044	2,519
Dermatology	1,602	2,777	4,379	2,745
Ear, Nose and Throat	4,939	7,368	12,307	10,157
Orthopedic	396	1,151	1,547	1,192
Eye	2,772	9,641	12,413	12,721
Hay-fever	182	3,149	3,331	3,864
Dental	1,197	1,176	2,373	2,687
Totals	41,434	101,566	143,000	133,730

At first glance it would appear the Surgical Clinics decreased. This is due to the inauguration on May 1st, of a special Fracture Clinic which admitted 694 new patients and had a total number of visits of 4,742. In this clinic a very efficient and practical follow up system by means of appointment cards is in operation.

The Medical Clinic made substantial gains. In these clinics a considerable amount of gastro-intestinal work is done. There were so many admissions to the Colored Female Clinic that it was necessary to add to the staff.

The Ear, Nose and Throat Clinic continues to lead all other individual clinics in total visits having an increase of 2,150 over the previous year and referred to the hospital for operation, 1,456 patients against 1,072 in 1922.

The Eye Clinic admitted 2,772 patients, total number of visits 12,413, referring to hospital for operation 170 patients.

The Genito-Urinary for men and Salvarsan Clinic continues to have the second largest attendance of the individual clinics, coming next to the Ear, Nose and Throat Clinic in number of visits recorded. New and up-to-date

equipment, and largely increased space have greatly facilitated the work. The slight decrease shown in comparison with last year is probably due to the night clinic established by the City Board of Health.

The Following statistics will show the tremendous amount of work done:

New Patients	3,066
Return Visits	20,658
Total Visits	23,742
Number of Microscopic Examinations	458
Doses Arsphenamine	6,012
Number of treatments including Arsphenamine	21,822

Worthy of note is the steady growth in the Orthopedic Clinic. The Physiotherapy Department with its increased facilities has proven not only a source of great benefit but a stimulus to this Department.

Substantial gains have been made in the Gynecological, Obstetrical and Neurological Clinics. These Clinics having additional space, are being utilized to an increasing extent for the instruction of students.

The Clinic of Dermatology increased in total visits 1,634. At present all electrical treatments of the skin are given in this clinic with the exception of the X-Ray treatments, which are given in the X-Ray Department of the Hospital.

The total number of visits in the Dental Clinic almost equalled those of the previous year, despite the fact that the clinic was closed from January 20th to May 1st and the Tuesday, Thursday and Saturday clinic days were discontinued. A distinct improvement was made by establishing an afternoon dental clinic for hospital patients. The morning clinics were so crowded that patients were turned away daily. The afternoon dental clinic with its resident staff has wholly obviated this condition.

The Pediatrics Clinic admitted 2,480 new patients and had 6,631 total visits. The very urgent need of following up the babies born in the maternity department of the hospital has been met by the co-operation of the Social Service Department. All white mothers from this Department who live in the city are visited by the Social workers and urged to bring their babies to the Clinic a few weeks after being discharged from the hospital.

The Clinic Laboratory with greatly increased space and a larger staff of technicians has shown corresponding increase in volume of work. The work in the Laboratory has almost trebled within the last three years. The total number of tests for the year was 14,904—7,261 of these were Wassermann tests. The number of x-rays made shows also an increase of almost 2,000—3,022 against 1,977 in 1922.

The most notable improvement in the Out-Door Department has been the completion of a three story annex and another story to the clinic building which has made it possible to centralize all the clinics in one building and giving also increased space. However the increase in attendance has caused our increased space to be hardly as much as some of our clinics need.

On May 1st, a Central Record Room was established in which all clinical records are kept and from which the records are distributed daily as the patients come in. From the standpoint of the specialist who is merely interested in seeing what particular cases in his own line are being treated, there are certain advantages in having his records filed in his own clinic, but from the standpoint of the institution as a whole, the assembling in one

room of all medical information of each patient is undoubtedly advantageous and certainly advantageous in its administrative aspect.

We are cognisant, our new record system has by no means attained the highest mechanical perfection but undoubtedly there has been great improvement, especially in the accuracy of our statistics, and our ability often to give helpful and important information and in bringing about closer unification of the Hospital and Out-Patient treatments.

The records of the clinics are being used more and more all the time, and there is marked improvement in the medical contents, filling out of diagnosis, the entry of details of physical examinations, the recording of treatment and condition, and laboratory and x-ray reports.

We wish to express our appreciation of the faithful and loyal efforts of the employees during the difficult period of readjustment; to the Sisters associated with us for their support and wise counsel; to the Social Workers for their invaluable aid; and especially to the visiting staff for their performance of duty and co-operation and to whom we acknowledge, is most largely due whatever good or success may have been achieved in coping with the heavy demands made upon the Out-Patient Department.

SARA BABB, R. N.,

Superintendent of Clinics.

REPORT OF THE TREASURER

New Orleans, La., December 31st, 1923.

To the Board of Administrators, Charity Hospital, New Orleans, La.
Gentlemen:

I respectfully submit below summary of receipts and disbursements, and on the pages following, comparative statement:

March 25th, 1924.

To the President and Members, Board of Administrators, Charity Hospital,
New Orleans, La.

Gentlemen:

The semi-annual examinations made of the books, accounts and vouchers of the Charity Hospital, as kept by the Secretary-Treasurer, Mr. Fred W. Matthews, proved that the combined cash receipts and disbursements of the General, Hospital Appeal, and all Special Funds, during the calendar year 1923, were as follows:

Cash Balance January 1st, 1923	\$ 53,986.04
Receipts January 1st, to December 31st, 1923	932,463.08
Total Balance and Receipts	\$986,449.12
Expenditures During Period	946,440.40
Cash Balance December 31st, 1923	\$ 40,008.72

Of this balance the sum of \$950.00 was held as a petty cash fund, and the remaining \$39,058.72 was on deposit in the Interstate Trust & Banking Company of New Orleans.

Yours very truly,

W. N. McFARLAND,

Supervisor of Public Accounts.

CHARITY HOSPITAL APPEAL

"WHEREAS, The Board of Administrators having exerted their best efforts to obtain financial assistance from the State of Louisiana to make much needed improvements, and

"WHEREAS, The State's financial condition was such as to preclude the possibility of realizing a sufficient sum for immediate use, the Board of Administrators called a citizens' mass meeting, March 27th, 1923, which was held at the St. Charles Hotel, and the following resolution unanimously adopted: 'RESOLVED, That the appeal of the Charity Hospital will be answered by the citizens of the State, and that the men and women at this meeting promise their loyal support.' and

"WHEREAS, The strenuous efforts, untiring zeal, and increasing labors, resulted in raising the sum of \$270,000.00 by the good people of our glorious State, irrespective of color or creed, therefore

"BE IT RESOLVED, That the Board of Administrators of Charity Hospital is deeply appreciative of the response to its appeal and pledges that the money donated shall be dedicated to relieve the crowded condition existing at the Charity Hospital."

REPORT OF HAY-FEVER AND ASTHMA CLINIC

An analysis of 402 cases treated in the Hayfever and Asthma Clinic (series D), 150 or 37½ per cent had asthma, either with or without hayfever. Of these, 25 per cent were male, and 75 per cent female. This does not prove that women are more subject to asthma than men, as the ratio in our private practice indicates the reverse, but that among the class that attend free clinics, more women than men have the time or desire to avail themselves of the Hayfever and Asthma Clinic.

AGE OF PATIENT

The ages of the asthma patient were distributed as follows:

1 to 10 years, 9 per cent	40 to 50 years, 16 per cent
10 to 20 years, 9 per cent	50 to 60 years, 10 per cent
20 to 30 years, 13 per cent	60 to 72 years, 3 per cent
30 to 40 years, 18 per cent	

This shows that 64 per cent of those applying for the treatment of asthma were between 20 and 50 years of age. Only 18 per cent were under 20 years.

AGE OF ONSET

The onset of the asthma as regards the age of the patients was as follows:

1 to 10 years, 19 per cent	40 to 50 years, 14 per cent
10 to 20 years, 20 per cent	50 to 60 years, 5 per cent
20 to 30 years, 12 per cent	60 to 70 years, 4 per cent.
30 to 40 years, 26 per cent	

This analysis shows that 75 per cent of the cases had their initial attack of asthma between the ages of one and 40 years.

The duration of the attacks up to the time of treatment were as follows:

1 year or less, 11 per cent	10 to 15 years, 12 per cent
1 to 5 years, 52 per cent	15 to 20 years, 6 per cent
5 to 10 years, 15 per cent	20 to 50 years, 4 per cent.

RADIOGRAPHS

In 38 of these cases, radiographs were taken, with the following result:

Enlarged thymus.....	1 case
Aneurism	2 cases
Enlarged bronchial glands.....	1 case
Tuberculosis	3 cases
Fibrosis of lung	2 cases
Dilated bronchi	2 cases
Thickened bronchial shadow	2 cases
Unresolved pneumonia	2 cases
Inflamed hilum	3 cases
Atheroma of bronchial artery	1 case
Atheroma disseminated	1 case
Negative plates	17 cases

The X-ray Department of the Hospital has given active cooperation to our Clinic, and has proven of special assistance in the diagnosis of non-allergic cases of asthma.

SENSITIVITY

Of the asthma cases treated in the Clinic, 71 per cent gave a more or less positive reaction to the protein test of pollen, epidermal material or food.

From cases in which the onset of the asthma had commenced two weeks after birth to 50 years, 75 per cent of the cases were sensitive to protein tests, but all cases between 50 and 60 years were negative. Contrary to the observation of the majority of other investigators, two of the three cases, in which the onset of the asthma was between 60 and 70 years, gave a marked positive reaction to the pollen tests.

The cases that were positive to protein tests in reference to the age of onset were as follows:

1 to 10 years, 69 per cent
10 to 20 years, 67 per cent
20 to 30 years, 73 per cent
30 to 40 years, 83 per cent

40 to 50 years, 72 per cent
50 to 60 years, 70 per cent
60 to 70 years, 2 of 3 cases.

HEREDITY

The records of heredity in these cases show that 28 per cent of the patients had relatives of the first or second degree with hayfever or asthma. While this indicates the influence of heredity in asthma, the ratio is not as high as in our hayfever cases, in which it is 37 per cent.

WM. SCHEPPEGRELL, M. D.

N. F. THIBERGE, M. D.

REPORT OF DIRECTRESS OF NURSES

To the Board of Administrators of the Charity Hospital of Louisiana, New Orleans, La.

Gentlemen:

Beginning the 30th year of its service, our School of Nursing contemplates the extension of its efforts.

The past year just closed with the usual courses of instruction in theory and practice, so well outlined by the Louisiana Nurses' Board of Examiners and in direct accordance with the National League of Nursing Education. The school is also registered with the Regents of the University of New York which confirms the fact, that it does not exist solely for the economic value to the hospital, but offers excellent educational advantages to women who desire to enter. The influence of our graduates demonstrated in the many fields of nursing, assures us that the nursing service provided for the hospital has developed in efficiency and usefulness in the last year.

In order to maintain the standard we must increase the number in our nursing staff. At the present time the number of nurses to daily average of patients is entirely out of proportion. The ratio of nurses to patients is 1—15 on day and 1—50 on night duty. Two hundred nurses would adequately supply the nursing service in an institution of this character and enable the school to satisfactorily perform its functions in teaching and practice.

It is hardly possible to overestimate the importance of the conditions under which student nurses live. Next to hours of duty, the housing and living conditions form the factors which affect in a most serious way, the health, spirit and the general power to handle their work efficiently or to derive benefit from the instruction and training which is offered in part payment for their services.

Owing to the rapidly growing hospital field, which necessarily calls for an increase in the number of nurses, our double rooms were made into dormitories by the addition of extra beds to accomodate more students. Provisions had to be made for personal clothing and other necessities as will enable the student to keep her belongings in good order, thus crowding the rooms beyond their normal capacity.

The present lavatories do not provide ample facilities. There should not be less than one bath room for six students, if modern requirements are to be met.

Since night duty is such a disruption of normal life, suitable quarters should be provided for students on this service to insure protection from noise and other disturbances.

While the sick rate of 1923 was not usually high, we regret to state that it has increased fifty per cent over the previous year. It is assumed that one of two reasons may be responsible for this increase—either the unusual climatic changes during the past few months or the crowded condition of the Nurses' Home. Since the student nurses receive their training under peculiarly difficult and exacting conditions and are subject to strains and responsibilities, quite unlike those which students in any other profession meet, they need an atmosphere of quiet, comfort and refinement.

The school takes pride in reporting a group of women of exceptional ability among its ranks, and in training these, we must keep health in mind. Our institution is supported by the public and we have no right to impair the health of a woman in a hospital maintained by taxes.

The present crowded situation of the Nurses' Home is reported as absolutely unavoidable and should be regarded as a temporary and undesirable expedient. We hope the bed capacity of the hospital will not be increased unless suitable quarters can be provided for more nurses, so that it will be possible to render our sick the proper service.

The school graduated sixteen nurses during the past year. Next year we hope to graduate forty. Four scholarships and an Honor Pin were awarded to graduates for Highest Grades. General Proficiency, and excellent conduct during the three years course.

Under general improvements of the Nurses' Home, we gladly mention the painting of the entire building and the installing of a new lighting system on the first floor.

We gratefully acknowledge the support and encouragement given by the members of the Board and our Superintendent. We are also greatly indebted to our House Staff for professional services to our sick nurses. Finally, we thank the Teaching Staff for their splendid cooperation and attribute to their generous efforts whatever success the school has attained.

REPORT OF SOCIAL SERVICE DEPARTMENT

Dr. Wm. W. Leake, Superintendent
Charity Hospital.

Dear Doctor Leake:

The past year has been one of increased activity in the Social Service Department.

A case worker has been assigned to each building of the hospital. This has enabled the ward service to be more fully developed. There is still great need of additional workers for the Out-Door Clinics, where more extensive work can be carried on.

The staff consists of five case workers, one full time clerical assistant, one part time clerical assistant and two volunteers, the volunteers give one day a week to follow up care. One devoting her time to the new born baby service, the other assisting the workers in the follow up care of patients.

The staff has accomplished much through its work, which covers besides the medical problems, many home and family problems, problems of child welfare, of poverty, of occupation and problems of individuals.

The workers have been valuable in bringing information to the physician concerning the patients, in follow up care, often preventing the return of patients to the hospital. I think many of our physicians will agree with Dr. Cabot in his statement that "the medical social workers by demonstration have made it clear that good medical social work is an integral part of good medical work, not as an independent philanthropy, but a necessary part of a thorough diagnosis and effectiveness."

The worth of the Social Service is summarized in the following excerpt which I quote from a letter recently received from a health officer of a neighboring parish. "We want to thank you for the splendid co-operation you have given in this case. I wonder how people got along before they had a Social Service Department to help them. You have indeed been a great help to our community alone and we feel grateful to you."

During 1923 the Department was fortunate in having as visitors Miss Antoinette Cannon, President of the American Association of Hospital Social Workers, and Miss N. F. Cummings, Assistant Editor of the Hospital Social Service magazine, both of whom made a survey of the hospital, the Social Service Department and its problems.

The Ford Sedan presented to the Department on Christmas day by ten generous and public spirited gentlemen will greatly facilitate the work of bringing crippled patients to the clinics or discharged patients to their homes.

The most serious problem of the Department is what to do with the discharged homeless patients. This is especially true of men too old or not physically able to work. The existence of such a home where these unfortunates could be sent will prove of untold benefit to humanity.

The accompanying statistical report outlines in detail the work accomplished during the year.

In concluding, permit me to express my gratitude to the Board of Administrators, the physicians, sisters, nurses, clinical secretaries and outside agencies for their co-operation in behalf of the patients who have been our charge.

Respectfully,

LAURA BACHMAN

Director of Social Service.
